Introduction

Banuba VE is a free, one stop solution for all your video & photo editing needs. Banuba provides a comprehensive toolbox to trim, cut, merge, enhance video clips directly on your phone with few taps. Banuba is capable of photo manipulation including overlay text, transform, contrast and saturation manipulation. Beyond basic editing, Banuba offers AI Clipping for automated appropriate visual effects, transitions and background music according to the clips context. Easing the complex and tedious editing process to one-tap operations.

Intended Users

Banuba is designed for a diverse audience ranging from beginner to experienced editors. The ability to provide features for all kinds of editing needs makes it a complete toolkit. Banuba is best suited for:

- Content creators & Social media influencers
- Students & freelancers
- Business owners & entrepreneurs
- Everyday/Casual users

User Profile Section

The target audience for the app includes casual smartphone users, students, and new content creators between the ages of 15 and 35 who wish to create edited video and photo content without investing in specialized software or training. The app is also relevant to social media users that frequently post content on social media platforms like Instagram, TikTok, and Snapchat.

The app does not require any editing experience. The target user should be comfortable using their smartphone, meaning they should be able to handle their multimedia content. Knowledge of editing techniques like trimming and transitions is helpful for better progress but not required, as Banuba's AI-based editing tools eliminate the need for technical expertise to a greater extent.

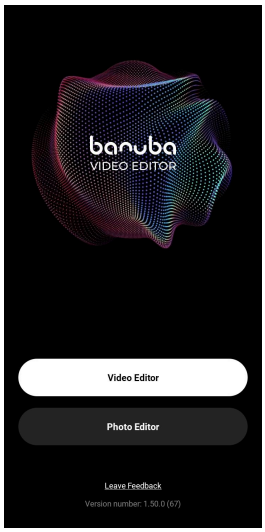
User Goals

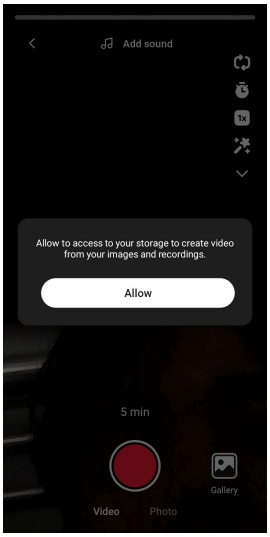
- Trim, cut, and merge video content to form a cohesive piece of content
- Improve their photos by applying contrast, saturation, and transformation effects
- Utilize the AI Clipping tool to assist in editing and save time
- Use picture in picture mode, useful in making reaction videos

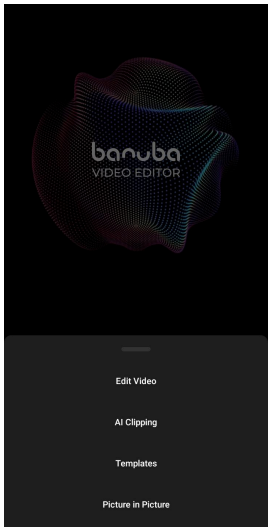
Task-Based Instructions

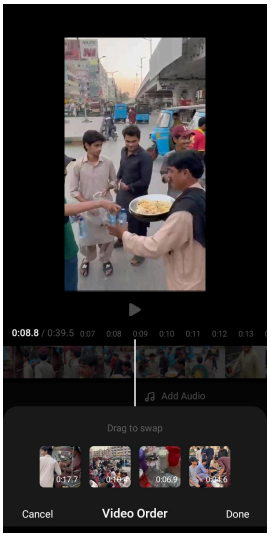
Importing and Arranging Media:

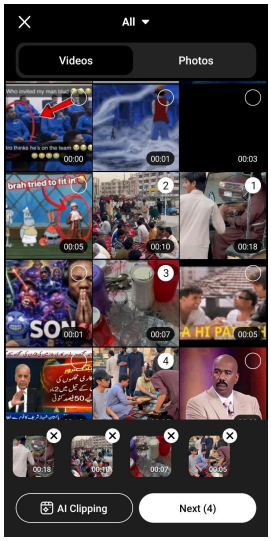
- Select **Video Editor** mode from the home screen.
- Tap **Edit Video** from the pop-up options.
- Record a clip directly using the camera, or tap the **gallery icon** in the bottom-right corner to import from your device.
- Select **Allow** if asked to grant the application permission to access your device's media library.
- Select one or multiple media files (images or videos) by tapping their thumbnails. A number sequence will appear on each selected item.
- Tap **Next** once all required media has been selected.
- To import additional media during editing, tap the **+** icon on the right side of the timeline and repeat steps 5 and 6.
- To **change the sequence of media** in the timeline, **click and hold** one of the media files in the timeline.
- Drag and swap the thumbnails to get your preferred sequence.
- Click **Done** to confirm the video order or **Cancel** in case of change of mind.









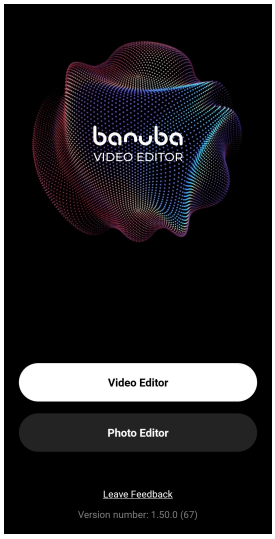


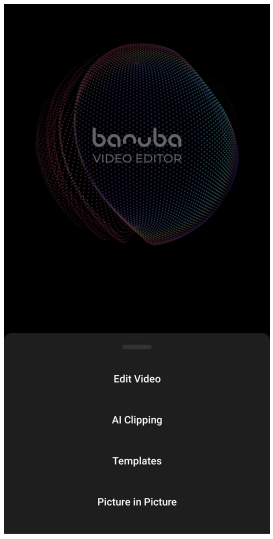
AI-Clipping to transform raw footages into ready to post Clips

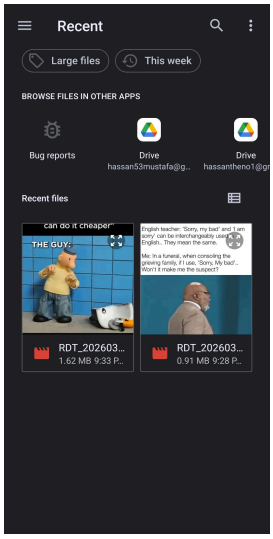
- Select **Video Editor** mode from the home screen.
- Tap **AI Clipping** from the pop-up options.
- Select **Allow** if asked to grant the application permission to access your device's media library.
- Select one or multiple media files (images or videos) by tapping their thumbnails. A number sequence will appear on each selected item.
- Tap **AI Clipping** once all required media has been selected.
- Wait for the media to process for a while.
- Choose a **theme** of your choice from the horizontal list.
- Tap on the **Music** icon from bottom left to use music of your choice.
- Use the **Scissor** icon to use a specific part of music in edit.
- Select **Next** on the top-right corner once done with the customization.
- Select the **thumbnail** from your video frames.
- Click **Done** and wait for it to export.

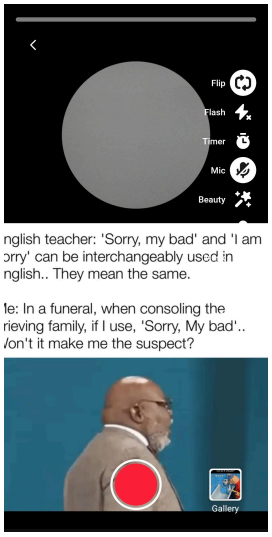
Picture in Picture:

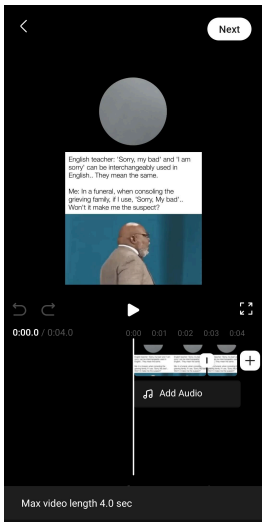
- Select Video editing from the Home Page
- Select Picture in Picture
- Allow access to gallery
- Select the video you want to edit
- Click the red button to start recording your video on the original video
- Select options in the top right corner to change the layout and edit filters
    - Flip to change camera side
    - Timer to add a time condition
    - Mic to add voice
    - Beauty to add filters over your face
    - Filter to edits filter over the complete video
    - Mask to make AI-Assisted features over the input video
    - Green Screen to remove background from the input video
    - Pip (Picture in picture) to adjust the layout
- Tap on the tag button over the record button to select the current recording and restart.
- Tap next to move to video editing
- Edit the video as per the video editing instructions.
- Select a thumbnail from the video by dragging the slider OR upload from the gallery.
- Tap done to move to the next section
- Tap on social media icons to share on respective social media
- Tap on save to save.

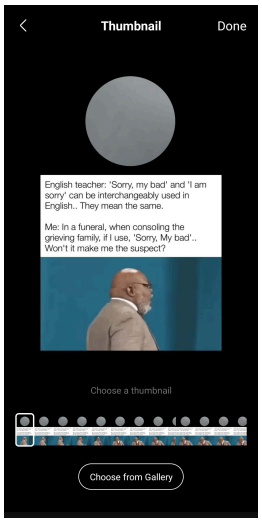


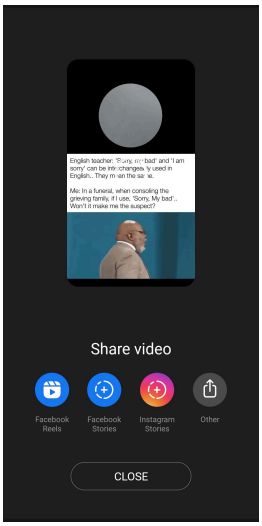












Templates:

- Select Video editing from the Home Page
- Select Templates
- Select your preferred template
- Tap to try this template to confirm selection
- Select Videos from gallery to use over this template. (The total length of videos should be at least the length of the selected template.)
- Tap save on the top right corner to save the image.
- Select a thumbnail from the video by dragging the slider OR upload from the gallery.
- Tap done to move to the next section
- Select the sharing option, or click the cross in the top-right corner to go to the home page.

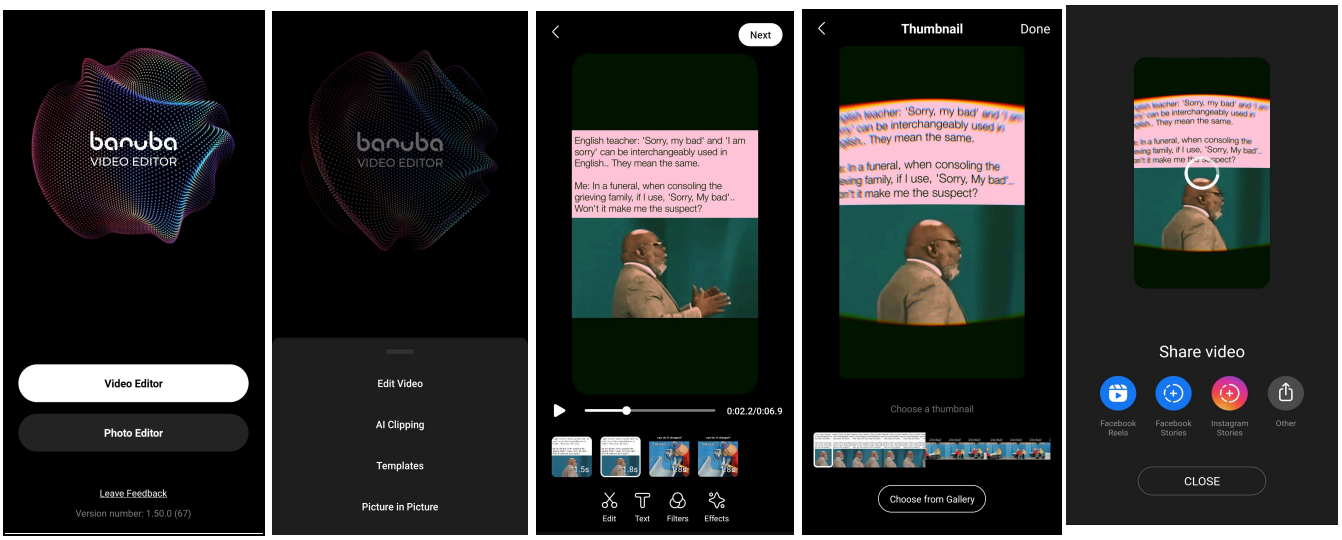


Photo Editor:

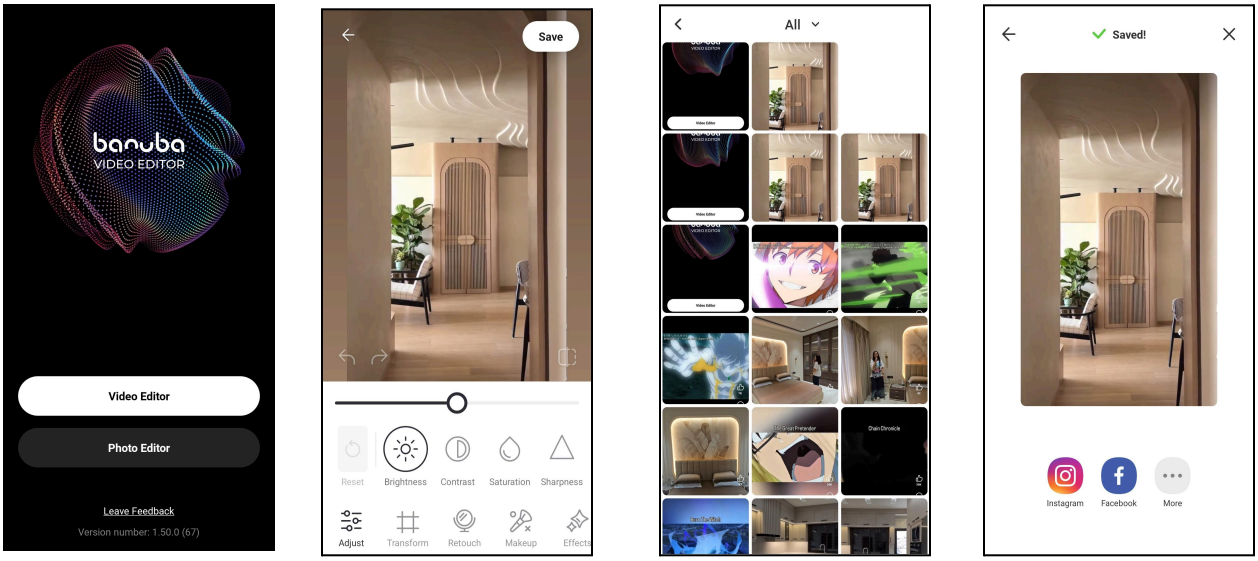
- Select Photo Editor from the Home Screen.
- Permit to access the gallery.
- Select the Image you want to edit from the gallery.
- Choose the options from the taskbar to edit the image:
    - Adjust to retrace the image's colour contrast or pixelation
    - Transform to reshape the image
    - Retouch for face focus editing
    - Makeup to add AI-assisted face makeup
    - Effects to add background hue on the images
- Drag the slider to adjust the intensity.
- Tap save on the top right corner to save the image.
- Select the sharing option or click the cross in the top right corner to go to the home page.



Troubleshooting

Problem	Recommended Solutions
App runs slow or freezes when editing	• Go to Settings > Storage > Clear App Cache. • Close other apps running in the background to free up RAM.
Export video fails most of the time	• Ensure you have at least double the file size free in storage space. • If using cloud effects, verify your internet connection.
"Media not supported" when importing	• Convert the video to a standard MP4 or MOV file before importing it into Banuba.

Glossary

- **Aspect Ratio**: This is the ratio of the size of a video, i.e., the ratio of its width to its height (for instance, 9:16, as used by TikTok).
- **Saturation:** refers to the intensity or vividness of colors in an image or video. A **high saturation** makes colors appear bold and vibrant, while **low saturation** makes them look washed out or dull.
- **Sharpness:** controls the clarity and definition of edges in an image.
- **Overlay:** This is the addition of extra media, i.e., a video or a photo, to the background clip.
- **Playhead:** This is the vertical white line on the timeline, indicating the current frame being displayed or previewed.
- **Render:** This is the process of generating the final video file from the project.
